
KAVIRAJ THANGAPANDIAN

Chennai 600071 | +91-8015218006 | kaviraj.thangapandian@gmail.com

Summary

Results-driven Computer Science and Engineering undergraduate specializing in AI and ML with hands-on experience as an AI intern. Developed AI-driven platforms and chatbots using Python, FastAPI, and large language models. Expertise in backend development and prompt engineering, dedicated to delivering impactful AI solutions to real-world challenges.

Skills

Programming Languages: Python, Java, JavaScript, SQL	Data & Databases: Pandas, NumPy, Exploratory Data Analysis (EDA), Data Visualization, MySQL, NoSQL Databases
Frontend & Backend: HTML, CSS, React.js, FastAPI, REST APIs, API Integration	Developer Tools: Git, GitHub, Docker, Postman, Jupyter Notebook, Google Colab, Visual Studio Code
AI & Machine Learning: LLMs, Prompt Engineering, RAG, AI Chatbot Development, NLP, Machine Learning Pipelines, Data Preprocessing, Feature Engineering, Model Evaluation	Professional Skills: Problem Solving, Analytical Thinking, Team Collaboration, Communication, Adaptability, Debugging

Experience

AI Intern Jio Platform Limited	06/2026 to Current Mumbai, India
- Developed multi-purpose AI chatbot platform, enabling users to create customized chatbots with user data. - Integrated large language models (LLMs) to generate context-aware responses based on user knowledge. - Built and integrated backend APIs using Python and FastAPI for chatbot data processing and AI interactions. - Developed AI-powered features and enhanced backend functionality for Get-It platform, improving user experience and engagement. - Collaborated with mentors and cross-functional teams to test, debug, and improve AI applications. - Supported development of AI models for data analysis and predictive insights, contributing to data-driven decision-making. - Collaborated with team members to plan and execute AI project strategies, ensuring alignment with project goals and timelines.	
Machine Learning Intern Cognifyz Technologies	01/2026 to 02/2026 Remote
- Developed machine learning models for restaurant rating prediction and cuisine classification using Python and Scikit-learn, enhancing user engagement. - Achieved 85–90% accuracy through data preprocessing, feature engineering, and model optimization. - Created a content-based recommendation engine tailored to user preferences, improving user satisfaction and retention. - Conducted data preprocessing, exploratory data analysis, and geospatial analysis to identify location-based trends, informing business strategies. - Evaluated models with accuracy, precision, recall, and RMSE metrics, reducing prediction error by over 20%.	
Machine Learning Intern SystemTron	01/2026 to 02/2026 Remote

- Engineered and deployed end-to-end machine learning solutions for car price prediction and diabetes risk assessment, enhancing predictive accuracy.
- Achieved model accuracy of 85–92% through advanced preprocessing, feature engineering, and algorithm selection, contributing to reliable decision-making.
- Optimized model performance through hyperparameter tuning, enhancing predictive efficiency by over 20%.
- Designed scalable ML pipelines for data ingestion, cleaning, feature extraction, training, evaluation, and visualization.
- Conducted exploratory data analysis to uncover key patterns and enhance model interpretability.
- Applied supervised learning techniques to structured datasets from Kaggle and real-world sources to address domain-specific challenges.

Artificial Intelligence Intern

12/2025 to 01/2026

Reliance Industries

Jamnagar, India

- Developed AI-based IT help desk system to automate support and manage user queries efficiently.
- Utilized NLP techniques for intent detection and query classification, enhancing response accuracy.
- Generated intelligent responses and created support tickets, enhancing user interaction efficiency.
- Constructed backend logic with n8n, integrating AI models to support seamless enterprise operations.
- Automated workflows to optimize ticket management, facilitating scalability.
- Improved context-aware response generation, reducing manual intervention.

Education

Bachelor of Technology: Computer Science With Specialization AIML

Expected in 05/2028

SRM Institute of Science And Technology

Chennai

- Gained a strong foundation in computer science principles at SRM, with structured learning in programming, data structures, databases, and core AI & ML concepts, complemented by hands-on labs and continuous assessments.
- GPA: 7.8

Higher Secondary

04/2024

Aditya Vidyashram

Chennai

- Built foundational knowledge in mathematics, computer science fundamentals, and logical problem-solving, supporting further studies in engineering.
- Developed discipline, time management, and exam-oriented learning skills through structured academic coursework.

Secondary School

01/2022

Velammal Vidyalaya

Chennai

- Acquired strong fundamentals in mathematics, physics, and computer science, forming the base for higher education in computer science
- Strengthened analytical thinking and conceptual understanding through theory-based learning and practical problem-solving.

Certifications & Licenses

Oracle Cloud Infrastructure AI Foundations — Oracle, Issued Nov 2025

Getting Started with Artificial Intelligence — IBM, Issued Jan 2026

Technology Job Simulation — Deloitte (Forage), Issued Dec 2025

TCS iON Career Edge – Young Professional — Tata Consultancy Services, Issued Sep 2025

Introduction to Data Science — Infosys Springboard Issued Apr 2026

Artificial Intelligence — Infosys Springboard Issued Apr 2026

Awards & Honors

2nd Place - VibeX (TEXUS'26) for AI-powered full-stack web application -SRM Institute of Science and Technology, Issued 2026

2nd Place – Startup Crash Course for “AuraCare” (AI-powered elder care platform) - Codezilla Club, SRM Institute of Science and Technology, Issued 2026

Project

FinTech Credit Scoring System

AI-based financial eligibility platform for gig workers

- Developed a **credit scoring platform** that evaluates gig workers using earnings, expenses, EMIs, and digital payment behavior.
- Implemented a **transparent eligibility scoring model** with factor-based breakdown and visual analytics.
- Built a **What-If financial simulator** to dynamically recalculate credit scores based on user inputs.
- Integrated a **loan product matcher and score history tracker** to recommend suitable financial products and monitor credit improvement.
- Added **regional language explanations using AI** to improve financial accessibility.

Tech Stack: React.js, Node.js, Express.js, JavaScript, Chart Libraries, AI/LLM Integration
