Summary

Undergraduate B.Tech CSE student specializing in AI/ML engineering with internship experience building LLM applications using multimodal RAG and multi-agent chatbot pipelines. Proficient in Python, FastAPI, REST APIs, Qdrant, prompt engineering, scikit-learn, and XGBoost. Full-stack development experience with React and Node.js; hackathon wins include 1st and 2nd place.

Skills

Languages: Python, Java, JavaScript, SQL

Web & Backend: React.js, Node.js, Express.js, FastAPI, REST APIs, Server-Sent Events

AI & ML: LLMs, RAG, Multimodal RAG, Multi-Agent Systems, NLP, Prompt Engineering, Scikit-learn, XGBoost

Data & Databases: Qdrant (Vector DB), MySQL, NoSQL, Pandas, NumPy

Tools: Git, GitHub, Docker, Postman, n8n, OpenCV

Experience

Software Developer Engineering Intern

06/2026 to 08/2028

Jio Platform Limited

Mumbai, India

- Built GET-IT, a multilingual IT helpdesk assistant that resolves employee troubleshooting queries using a RAG pipeline on a vector database (Qdrant), incorporating source citations to enhance answer reliability.
- Integrated multimodal and multilingual input for GET-IT, enabling screenshot error analysis with a vision-language model, voice queries with speech recognition, and translation for English, regional languages, Hinglish, and Tanglish.
- Implemented intent classification, an Assumption Guard that asks for missing context (such as the OS) before answering, and a dynamic troubleshooting planner. Streamed responses in real time with FastAPI and Server-Sent Events.
- Developed a multi-purpose chatbot-creation platform where admins create domain-specific AI agents by uploading files. Each agent gets its own system prompt, documents, and isolated Qdrant collection.
- Built the multimodal ingestion pipeline for PDFs, scanned documents (vision-model OCR fallback), images, video keyframes (OpenCV) and audio, and improved retrieval with page-ordered context, semantic ranking boosts, and page/timestamp-linked citations.

Artificial Intelligence Intern

12/2025 to 12/2025

Reliance Industries

Jamnagar, India

- Applied NLP for intent detection and query classification, managing vague or partial inputs and writing system prompts for accurate, consistent responses.
- Built generative AI help desk that answered employee questions in natural language and generated troubleshooting guidance.
- Automated workflow in n8n by routing requests to AI engine, applying conditional logic by query type, and creating priority-based tickets to reduce manual effort.
- Built modular backend with structured data handling for queries, ticket status, and resolution history, tested real-world cases and refining prompts and logic flow for improved response consistency.
- Worked with Ollama and Open WebUI to run LLMs locally for secure inference.

Project

FinTech Credit Scoring System | React.js, Node.js, Express.js, JavaScript, LLM Integration |

AI-based financial eligibility platform for gig workers

- Built a full-stack credit scoring platform that evaluates gig workers on earnings, expenses, EMIs, and digital payment behavior, with a transparent factor-by-factor score breakdown and visual analytics.
- Developed a What-If simulator that recalculates the credit score as users change their income, expense, or EMI inputs.

- Implemented a loan product matcher and score history tracker that recommends suitable products and shows credit improvement over time.
- Integrated an LLM to explain scores in regional languages, making credit insights accessible to non-English speakers.

Restaurant Rating Prediction & Cuisine Classification | Python, Scikit-learn, Pandas, NumPy, Matplotlib

- Built rating prediction and cuisine classification models with 85-90% accuracy, and a content-based recommendation engine, plus geospatial analysis of location trends.

Car Price Prediction & Diabetes Risk Model | Python, Scikit-learn, Pandas, NumPy, Matplotlib

- Built end-to-end ML pipelines (ingestion, cleaning, training, evaluation) on Kaggle datasets with 85-92% accuracy, improved through hyperparameter tuning.

Education

Bachelor of Technology: Computer Science With Specialization AIML

Expected in 05/2028

SRM Institute of Science And Technology

Chennai

- Gained a strong foundation in computer science principles at SRM, with structured learning in programming, data structures, databases, and core AI & ML concepts, complemented by hands-on labs and continuous assessments.
- GPA: 7.8

Higher Secondary

04/2024

Aditya Vidyashram

Chennai

- Built foundational knowledge in mathematics, computer science fundamentals, and logical problem-solving, supporting further studies in engineering.
- Developed discipline, time management, and exam-oriented learning skills through structured academic coursework.

Secondary School

01/2022

Velammal Vidyalaya

Chennai

- Acquired strong fundamentals in mathematics, physics, and computer science, forming the base for higher education in computer science
- Strengthened analytical thinking and conceptual understanding through theory-based learning and practical problem-solving.

Awards & Honors

2nd Place - VibeX (TEXUS'26) for AI-powered full-stack web application -SRM Institute of Science and Technology, Issued 2026

2nd Place – Startup Crash Course for “AuraCare” (AI-powered elder care platform) - Codezilla Club, SRM Institute of Science and Technology, Issued 2026

Certifications

- Oracle Cloud Infrastructure AI Foundations — Oracle, Issued Nov 2025
- Getting Started with Artificial Intelligence — IBM, Issued Jan 2026
- Artificial Intelligence — Infosys Springboard Issued Apr 2026
- Introduction to Data Science — Infosys Springboard Issued Apr 2026
